

Joe Gray

AI agents that do the work. A human who makes the call.

I designed and operate a personal multi-agent AI system: 8 agents, 6 active, handling about 700 tasks and messages a week across email, budget, time audits, shopping, design and posting, and upkeep. I review about 35 agent decisions a week on one-tap approval cards, and it saves me about 10 hours a week.

WHAT I BUILT

In about April 2026 I started building a personal multi-agent AI system. I designed it, directed the build, and operate it every day. It runs my day-to-day operations.

8

AI agents, 6 active

ABOUT 700

tasks and
messages a week

ABOUT 35

agent decisions a
week I review

ABOUT 10

hours a week
saved

- **Inbox triage.** Agents triage and draft email. An approval card comes before anything is sent.
- **Budget.** Agents track the budget and forecast what is ahead.
- **Time audits.** Agents run time audits, so I can see where the hours go.
- **Short-form video.** Agents post short-form video to YouTube and Instagram by computer use.
- **One message hub.** iMessage, WhatsApp, Signal, Instagram and email in one place.

HOW I WORK

- **A yes before anything goes out.** In my own system nothing in the message hub is sent until I approve it, and I review about 35 agent decisions a week. Your name on an email deserves the same care.
- **Discretion.** For a tech founder I handled confidential family, financial and scheduling matters under an NDA. Private stays private.
- **Write it down.** Checklists and SOPs for travel, household and vendors, run-of-show documents for events, and a written runbook for every agent.
- **Steady when it goes sideways.** I led a client's cloud data migration (about 50 users) through a server provider outage and finished with minimal data loss. When a retreat producer misallocated funds, I renegotiated, ended the contract, and the retreat still ran.

TOOLS

AI and automation: Claude, Claude Code, OpenAI Codex, ChatGPT, Gemini, Perplexity, Zapier, n8n

Workspace: Google Workspace, Microsoft Office, Excel, Slack, Notion, Trello, DocuSign, Zoom, Calendly, QuickBooks

Creative and marketing: Canva, Figma, Adobe Photoshop, Adobe Premiere, CapCut, Squarespace, WordPress, Shopify, Hootsuite, Meta Business Suite

WHAT I BRING TO AN AI OR OPERATIONS TEAM

- **Agents with clear lanes.** 8 agents, 6 active, each with its own job: email, budget, time audits, shopping, design and posting, and upkeep.
- **Approval before anything is sent.** Nothing in my message hub is sent until I approve it. I review about 35 agent decisions a week on one-tap cards.
- **Runbooks, not magic.** Every agent has a written runbook, the same habit as the checklists and SOPs I wrote as an executive assistant.
- **Measured in hours.** About 700 tasks and messages a week handled by agents, and about 10 hours a week back.

EXPERIENCE

AI Operations

Independent project

Apr 2026 to present

- Designed and operate a personal multi-agent AI system: 8 agents, 6 active, about 700 tasks and messages a week.

CEO

Executive Edge, LLC

Sep 2024 to present

- Executive health and performance coaching business for executives and high-net-worth clients.

Executive Assistant / Personal Assistant

Private principal (tech founder)

Mar 2023 to Feb 2024

- Managed the calendar, flights, charters and ground transportation; arranged about 20 trips in 12 months.

Executive Assistant to the CEO and Managing Partner

Symbio (managed IT services)

Jan 2021 to Dec 2022

- Wrote checklists and SOPs, and worked with PR groups and publishing outlets on content in international publications.

Event and Retreat Producer

Self-employed

Jan 2018 to Dec 2021
